***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 8 and 12, drawn to a Method for encoding data for transmission in a communication system by partitioning a set of orthogonal codes, classified in class 370, subclass 208
- II. Claims 9 and 10, drawn to a Method for increasing the terminal capacity of a CDMA system comprising decreasing power associated with the transmission, classified in class 370, subclass 332.

III. Claim 11, drawn to a Method for decreasing the errors in a CDMA communication system comprising lengthening an error code associated with the transmission , classified in class 370, subclass 333.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable.

In the instant case, invention in Group I has separate utility such as for encoding data for transmission in a communication system by partitioning a set of orthogonal codes, that does not necessitate" the decreasing power associated with transmission to increase the number of transmission capable of utilizing a CDMA communication system at any time"

Art Unit: 2661

Invention in Group II has separate utility such as increasing the terminal capacity of a CDMA system comprising decreasing power associated with the transmission, that does not necessitate " the partitioning a first plurality of data bits associated with a first transmission into first packets"

Invention in Group III has separate utility such as for decreasing the errors in a CDMA communication system comprising lengthening an error code associated with the transmission , that does not necessitate " the decreasing power associated with transmission thereby increasing the number of transmission capable of utilizing a CDMA communication system at any time" . .

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

A telephone call was made to Mr. John Whelan on 12/9/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
